BALDO TRASPORTI a Helrom partner on the way to achieving net zero transport.

These emission savings accrue from the transportation of 352 semi-trailers by rail. The "well to wheel" calculation of saved emissions was conducted in accordance with all relevant norms (incl. EN 16258_2012). It is based upon EURO 6 usage for the route as well as the energy consumption for loading, shunting and rail

transportation. The calculated CO₂ savings can be drawn upon for the greenhouse gas balance sheet under the Corporate Sustainability Reporting Directive (CSRD) or other reporting initiatives.

The mission of Helrom GmbH is a sustainable reduction in CO₂ emissions in freight transport in support of European climate targets. We are delighted to be able to confirm this important contribution made by BALDO TRASPORTI.
